what makes us different

innovative text input technology

Adaptxt – the world's leading predictive text input application for smartphones, tablets and a wide array of mobile devices. Text input on mobile devices relates to any tool or application that allows the user to enter text using an onscreen or physical keyboard, and also predict the most accurate and viable alternative.

Text input on mobile devices relates to any tool or application that allows the user to enter text using an onscreen or physical keyboard, and also predict the most accurate and viable alternative.

Launched in 2006, Adaptxt has now become an industry leader in input technology offering features like word completion, context awareness, personal dictionary, dynamic language detection and faster tactile feedback making it 60% faster than traditional text entry applications.

About Us

About Adaptxt:

Adaptxt is an industry leading predictive text application for smartphones, tablets and other mobile devices. The application has been developed by KeyPoint Technologies; a UK based software company that is a pioneer in text input technology. Adaptxt has been created with the aim of delivering a faster, error-free and personalized text input experience to users.

Adaptxt has intelligent and intuitive features that allow it to continuously learn and adapt to the user's writing style, vocabulary and vernacular. This makes it one of the most advanced text input applications in the market today.

With Adaptxt, users can access industry specific dictionaries from fields like Medicine, Telecom, IT, Finance, Law, Business etc. They can enjoy their favorite sports using dictionaries designed for popular sports like Basketball, Baseball and Cricket. Adaptxt has something special for today's SMS generation in the form of SMS dictionaries which include chat slang ideal for those endless conversations.

Adaptxt has been built for a pan-global audience and supports over 90 languages including English US, English UK, European French, Canadian French, German, Italian, Arabic, Persian, Hindi etc.

Adaptxt offers you a complete keyboard customization experience. It allows the user to pick and choose the color, size and style of each keyboard element. It also lets you resize your onscreen keyboard keys based on the dimensions of your phone display. So whether you have a big or small screen you don't have to adjust to the keyboard. It adjusts to you.

With Adaptxt, users can download the standard keyboard along with ready to use industry specific add-on dictionaries directly to their mobile devices via the Adaptxt website. The Adaptxt keyboard can be downloaded on all Android phones from the Play Store and Facebook Store

About Keypoint Technology:

KeyPoint Technologies is a leading software company, headquartered in the UK. We are the pioneers of predictive text applications on smartphones, tablets and other mobile devices, and offer a unique range of text input solutions to customers across the globe. We are also the first software company to introduce professional add-on dictionaries that provide industry-specific word and phrase suggestions related to professions like Medicine, Law, IT, Telecom and Finance. We aim to make technology more inclusive, user-friendly and intelligent.

KeyPoint Technologies invests a great deal of time, money and resources in R&D, to augment text input experience of users across connected devices like smartphones, feature phones, tablets, connected TVs and IVI systems. We believe that users shouldn't have to adapt to technology, but that technology should adapt to the needs and requirements of users. Therefore, it's no surprise that we are trusted partners to the world's leading OEMs.

You can download the app here.
